IMPORTANT
This booklet is intended as a basic specification guide for architects, designers and builders. Please refer to the Instruction Manual supplied with the fireplace for detailed information regarding installation and operation.

Product installation manuals can also be viewed at: www.townandcountryfireplaces.com
Fireplace Dimensions

TCWS38.D2 Cad Drawing
Available at
www.townandcountryfireplaces.com

Examples of Common Locations
Minimum Clearances to Combustibles

**Minimum Clearances:**

- Side standoffs .................................................. 0 in. (0 mm)
- Back standoffs .................................................. 0 in. (0 mm)
- Top standoffs ................................................... 0 in. (0 mm)
- Bottom of appliance .......................................... 0 in. (0 mm)
- Adjacent side wall ............................................. 4 in. (102 mm)
- Ceiling to appliance ......................................... 24 in. (610 mm)

*Mantel to appliance* ........................................ See mantle clearance chart above

**Maximum Mantel extension** ................................ See mantle clearance chart above

- Mantel support .................................................. 4 in. (102 mm)
- Vertical vent pipe ............................................ 1 3/4" in. (45 mm)
- Horizontal Vent pipe (Top, sides and bottom) .... 1 3/4" in. (45 mm)

Unit may be recessed up to 4 1/2" with non-combustible masonry type material.
Framing kit is supplied with Fireplace

All other framing can be done with conventional lumber

Non-combustible Board Detail

- NON-COMBUSTIBLE materials must extend 11 7/8" above and 10 1/8" to the sides of the framing edges.
- NON-COMBUSTIBLE BOARD NOT INCLUDED.

Minimum Combustible Framing Dimensions

NOTE: Fireplace should be in its final location before framing.
NOTE: Combustible framing must allow for sheetrock installation.

Must allow for minimum 1/2 inch gap for non-combustible board and facing.
Proflame 2 Control System

Town and Country D2 Series fireplaces use the SIT Proflame 2 control system.

This includes an elegant hand-held remote control transmitter with an easy to read LCD display.

The fireplace also comes with a wall-mounted control switch which allows for simple ON/OFF operation, or can be linked with the hand-held remote control unit. This switch has a battery powered back-up system which allows operation during power outages. The wall-mounted switch easily connects to any customer supplied Home Automation System.

Hearth Extension

Caution: While a hearth extension is not required and combustible flooring materials may be brought directly up to the fireplace, many materials (such as wood flooring) may not tolerate the radiant heat from this fireplace, resulting in discoloration, shrinking and cracking. For this reason, we suggest a non-combustible hearth that is no more than 1” above the bottom of the fireplace. If material is thicker, fireplace must be raised accordingly.

Caution: Hearth extensions thicker than 1” will interfere with the window frame when opening.

Recessed Installation

Caution: This fireplace may be recessed up to a maximum depth of 4 1/2”. This recess must be constructed from non-combustible material. The space between the outside framing edge and the firebox must be completely free of any obstructions or debris, and the window, with trim fitted, must be able to move freely.

No building material is permitted to protrude past the framing edges attached to the fireplace under ANY circumstance.
Direct Vent Wall Installation

* Minimum height 84 1/2" from the floor to center of the frame opening with a maximum horizontal run of 20'.

Direct Vent Roof Installation
Wall Termination Venting Chart

All dimensions are approximate. Both rise and run may vary with different combinations of pipe.

NOTE: The vent must not exceed a total length of 68 feet. Any combination of rise and run may be used but must be constrained to the boundaries of this chart. A total of 3 90° elbows or combination of other elbows equalling 90° can be used without reducing horizontal run. For each additional 90° elbow, or an equal combination of elbows, reduce horizontal vent run by 2 feet. Ensure vent pipe is properly supported. A minimum of 1 support every 4’ must be used.

NOTE: The vent must not exceed a total length of 68 feet. Any combination of rise and run may be used but must be constrained to the boundaries of this chart. A total of four 90° elbows, or combination of other elbows equalling 90°, can be used without reducing horizontal run. For each additional 90° elbow, or an equal combination of elbows, reduce horizontal vent run by 2 feet. Ensure vent pipe is properly supported. A minimum of 1 support every 4’ must be used.
Direct Vent Terminal Clearance

Minimum clearances to the vent terminal must be maintained as shown (See illustration to right & below). Measure clearances to the nearest edge of termination hood. (See pitch table below).

NOTE: Vent terminal must not be recessed

NOTE: LOCAL CODES OR REGULATIONS MAY REQUIRE DIFFERENT CLEARANCES.

Terminal to sloped Roof Pitch Table
(minimum)

| Flat to 6/12 | 1.00 | 0.30 |
| Over 6/12 to 7/12 | 1.25 | 0.38 |
| Over 7/12 to 8/12 | 1.50 | 0.46 |
| Over 8/12 to 9/12 | 2.00 | 0.61 |
| Over 9/12 to 10/12 | 2.50 | 0.76 |
| Over 10/12 to 11/12 | 3.25 | 0.99 |
| Over 11/12 to 12/12 | 4.00 | 1.22 |

Direct Vent Terminal Minimum Clearances

A= *12 inches (30 cm) min. Clearance above grade, veranda, porch, deck, or balcony
B= *12 inches (30 cm) min. Clearance to window or door that may be opened
C= 12 inches (30 cm) min. Clearance to permanently closed window recommended to prevent condensation on window
D= 30 inches (76 cm) min. Vertical clearance to ventilated soffit located above the terminal within a horizontal distance of 2 feet (60 cm) from the edge of the terminal
E= 30 inches (76 cm) min. Clearance to unventilated soffit
F= 6 inches (15 cm) min. Clearance to outside corner
G= 6 inches (15 cm) min. Clearance to inside corner
H= 3 feet (90 cm) min. *Not to be installed above a meter/regulator assembly within 3 feet (90 cm) horizontally from the center-line of the regulator
I= *6 feet (1.8 m) min. Clearance to service regulator vent outlet
J= *12 inches (30 cm) min. Clearance to non mechanical air supply inlet to building or the combustion air inlet to any other appliance
K= *6 feet (1.8 m) min. Clearance to a mechanical air supply inlet
L= *7 feet (2.1 m) min. ^ Clearance above paved side-walk or a paved driveway located on public property
M= **30 inches (76 cm) min Clearance under veranda, porch, deck, or balcony

^ a vent shall not terminate directly above a side-walk or paved driveway which is located between two single family dwellings and serves both dwellings*
** only permitted if veranda, porch, deck, or balcony is fully open on a minimum of 2 sides beneath the floor*
* as specified in CAN/CSA B149.1 Installation Codes. Note: local Codes or Regulation may require different clearances
* for U.S.A. Installations follow the current National Fuel Gas Code, NFPA54/ANSI Z223.1

FOR REFERENCE ONLY. CONSULT MANUAL BEFORE INSTALLATION
Optional Power Vent

Reach almost any room or commercial setting. Optional Power Venting allows runs up to 110’ to an outside wall or roof surface (maximum 66’ of vertical run). Vent horizontally or vertically with up to six 90-degree elbows, including runs up to 3’ below the fireplace.

The premium Power Vent fan runs quietly outside, at the exterior terminal.

Power Vent Terminals
